92.—The Statements numbered 90 and 91 are in continuation of Nos. 86 and 87 of Part V. of the "Tables of Revenue, Population, &c."

93.—88 of these Tables was formed by combining the two preceding Statements, and is so far incorrect, that while it professes to give a view of the trade of Bengal, Madras, and Bombay collectively, it includes also the trade arising from the interchange of commodities between the several Presidencies. Thus the value of merchandize interchanged between Bengal and Madras, which forms part of the external trade of each of those Presidencies considered by itself, is only the value of the internal trade of the three Presidencies taken collectively, although blended in the Statement referred to, with the external trade of the whole of the Possessions in India.

94.—The information comprised in the Statements numbered 89, 90, 91, 92, 93, and 94 of Part V., is given more fully, although under a different form, in the Statements now inserted and numbered 92, 93, 94, 95, 96, and 97.

(a) At the Mints of Mexico, Zacatecas, Sombretete, Chihuahua, Durango, Guanajuato, Guadalajara, San Luis, Potosi, and Tlalpan. (b) At exchange of 48d. per Dollar. (c) At the Mint of Potosi.

(d) At 144½ Dollars per Marc, and 48d. per Dollar.

(e) The above statement, as far as the year 1830, exhibits the amount raised in, and exported from, the province of Coquimbo. In 1834 it presents the amount raised in the whole kingdom, as far as it can be made out; but the largest proportion is clandestinely exported to avoid the export duties.

(f) At the Mint of Santiago.

(g) At 136 Dollars per Marc, and 48d. per Dollar.

(A) At the Mint of Lima, from 1754 to 1789; at those of Lima and Cuzco, from 1790. In the first period a Marc is valued at 144½ Dollars, and in the second at 136

NOTE.—The first Act, viz. 10th George III. c. 39, for registering the Price of Grain in Great Britain, was passed at the latter end of the year 1770. This Act was very imperfectly carried into execution in Scotland, Returns of the Prices of Grain not being made but from a few of the counties; and from 1785 the Returns entirely ceased till the Corn Act of the 31st of Geo. III. c. 30, came into operation.

REMARKS ON THE EDUCATION SUMMARY OF SCOTLAND.

1. The number of inhabitants attributed to the several shires of Scotland in the foregoing Abstract of Education Returns differs in some instances from the Population Abstract of 1831, because several parishes extend into adjoining shires, in which case the entire parish is ascribed to that shire in which the largest portion of its population resides; this kind of correction being unavoidable in a return strictly parochial.

To the population of 1831 might be added, in strictness, an increase from 2,365,114 to 2,452,623, or 37 in 1,000, during the time which elapsed from the end of May 1831 to Lady-day 1834 (being two years and ten months), supposing the rate of increase continued to be the same during that period, as during the ten preceding years; such estimated increase somewhat lessens the proportion of children educated or under education in Scotland, but does not alter any of the numbers which are stated in the Summary or in the following remarks.

2. The difficulty of making inquiry concerning every child in a parish, especially in large parishes, has prevented many of the ministers from specifying the number of children under five years of age who have been taught to read or are now learning to read. The number actually returned appears to have been 16,283; which, by application of the rule of proportion to the population of the parishes where such defect occurs, gives 29,487 for all Scotland.

The number of children between five and fifteen years of age who have been taught to read or are now learning to read (as specified in the Returns) is 225,257; adding to which a due proportion for the parishes which are defective in this particular, and for two parishes from which no return could be obtained, viz., Bressay, Burray, and Quarff, and Gulberwick with Lerwick, in the Shetland Isles, the total number may be assumed at 323,154. According to the classification of ages in the year 1821 the number of children from five to fifteen years of age, at Lady-day 1834, must have been 593,288, supposing the same proportion now to exist throughout Scotland. The number of children between five and fifteen years of age, who have been taught to write or are now learning to write (as specified in the returns), is 114,626; adding to which a due proportion for the parishes which are defective in this particular, the total number of such children is 172,377.

3. The number of parochial schools is 1,047, in which are 1,170 instructors. The greatest number of scholars in these schools, between Lady-day and Michaelmas 1833, appears to have been 63,586; but, by application of the rule of proportion to apparently defective returns, the greatest number becomes 71,426, and the least number of scholars (36,029) in like manner becomes 50,029.

The greatest number of scholars at parochial schools between Michaelmas 1833 and Lady-day 1834 appears to have been 68,293; but by application of the rule of proportion, as before stated, the greatest number becomes 79,488, and the least number of scholars (37,543) in like manner becomes 54,166. The total amount of salaries, school fees, and other emoluments appertaining to the parochial instructors, in so far as the same have been returned, and exclusive of augmentation from Dick's bequest, was £55,339 from Lady-day 1833 to Lady-day 1834: some of the instructors have moreover received payments from Dick's bequest, which when generally appropriated, is expected to afford an average of £25 per annum to the several parochial instructors in the shires of Aberdeen, Banff, and Moray.

4. The number of schools not parochial is 3,995, in which are 4,469 instructors. The greatest number of scholars between Lady-day and Michaelmas 1833 appears to have been 147,811; adding to which a due proportion for defective returns, the estimated number becomes 189,427, and the least number of scholars (78,316), the return of whom is very defective, in like manner becomes 139,237. The greatest number of scholars at schools not parochial between Michaelmas 1833 and Lady-day 1834 appears to have been 154,160; adding to which a due proportion for the returns, as before, the estimated number becomes 207,310, and the least number of scholars (87,087), the return of whom is very defective, in like manner becomes 154,218.

5. The total number of schools (parochial and not parochial) is 5,042, in which are 5,639 instructors. The greatest number of scholars at school in the several shires, between Lady-day and Michaelmas 1833, appears to have been 211,397; adding to which a due proportion, as before stated, the estimated number becomes 260,853, and the least number of scholars (114,345), the return of whom is very defective, in like manner becomes 189,266. The greatest number of scholars at school in the several shires between Michaelmas 1833 and Lady-day 1834 appears to have been 222,453; adding to which a due proportion, as before, the estimated number becomes 286,798, and the least number of scholars (124,630), the return of whom is very defective, in like manner becomes 208,384.

Sabbath-day schools are frequently mentioned in the Returns; but children receiving daily instruction, and no others, are included in the foregoing Summary and in these remarks.

“The Middle Class,” termed in Swedish “Standspersoner,” or Persons not Noble, and yet not Peasants, sold, in 1835, a greater value of land than it purchased. The amount so produced has been subtracted (in Table No. II.) from that brought forward under the head of Increase from 1822 to 1834.

A greater quantity of land was purchased by the Peasants in 1835 than in the two previous years. The amount recorded of Sales of Land in 1835 was about £1,288,511, of which £32,430 was from forced Sales.

In regard to the Account of Mortgages, in the Report of the Justitiæ Minister at Stockholm, explanations and particulars are given which show that it should be considered only as an approximation to the truth. Much that the law requires is often not attended to by individuals. Many Deeds of Mortgage have expired by the lapse of ten years, without notice being given to the Courts; and some may have been in like manner renewed. To investigate thoroughly the expiration of Deeds, a perusal of the documents of those ten years, is stated by the Minister to be requisite. Notwithstanding the doubts and difficulties incidental to the subject, the Account of Mortgages is probably as near an approximation to the truth as circumstances permit.

OBSERVATIONS.—The information in the accompanying account has been extracted from a Report of the Swedish Board of Trade just issued. An increase is stated to have taken place of 16 in the number of manufactories, and in the value of their produce of about £93,000, on a comparison of 1834 with the year 1835. Above two-thirds of the woollen cloth is manufactured at Norrköping, where, in 1835, the quantity was about 22,500 English yards more than in 1834, and generally of finer quality. In an address of the President of the Board of Trade to the manufacturers there, in 1835, he congratulated them "on their good fortune that, by the aid of experienced foreigners, they could employ the newest and best machinery without paying the cost of experiment, and without, as in other countries, having to dismiss a number of workmen."

In 1826 only 540 articles of machinery were used in Sweden in the manufacture of cloth; in 1835 the number was 953, and persons employed had increased in a greater proportion. Almost sufficient wool is produced for the demand. In the year 1835 about 700,000 English yards of cotton and linen fabrics were made; the imports of cotton goods were in value £53,262, of linen goods £4,685. The cotton-mills with machinery produced, in 1835, about one-fifth more than in 1834. The British Consul is of opinion, however, that including what may have been produced last year, there has already been an over production. English yarn, chiefly from Hull, is now to be bought here at a cheaper rate than that manufactured in the neighbourhood.

It is proper to remark, that the results as to the consumption of each individual appear to be rather roughly calculated. For example, the first line of Zittau for 1835 should be correctly 11,38; 16,83; 3,10; 2,32; 33,63; I have, however, confined myself to the simple reduction of the results given in the original Table, in preference to re-calculating them, as the differences are but very trifling. No remarks are made upon the original Table. I should, however, observe, that the disproportionate consumption of the Leipzig district must be mainly caused by the number of strangers who visit this town at the Fairs. I cannot account for the discrepancy in the two years consumption of Pirna, and apprehend it must arise from some defect in the register.

(G).—INTRODUCTORY REPORT, illustrative of the annexed NINE STATISTICAL TABLES, abstracted from the CRIMINAL RETURNS of DENMARK during the period of Seven Years, from 1828 to 1834.

In the year 1828 the Danish Government, desirous of obtaining the most correct and minute information respecting the moral condition of the country, ordered a Statistical Return to be made of the number of persons charged with criminal offences, and tried before the Civil Tribunals of the Realm. This Return, which is published annually, shows, in distinct rubrics, the number of persons indicted, acquitted, or convicted, as well as the nature of offences committed in each district, indicating at the same time the punishment awarded by the laws. It further states the sex and age of the criminals, and whether they are natives or foreigners; and it includes Denmark, the Faroe Islands, Iceland, and the Danish West Indies, not, however, comprising Sleswick-Holstein. The first Return was made for the year 1828, and it is from these materials that I have formed the annexed nine Tables, embracing the septennial period from 1828 to 1834; and I have endeavoured to arrange them in such a manner as to afford a greater facility in comparing the state of crime in Denmark with that both in England and France.

According to the General Summary of the Criminal Returns (Table I.) the total number of persons charged with crimes and offences in Denmark, during the period above stated, amounted to 12,012, of which 977 cases were left in suspense, being about 140 at the end of each year; moreover, 32 cases were dismissed, and 1,851 persons were acquitted, by which the number of condemnations is reduced to 9,152. Hence it results, that, of 100 persons indicted in Denmark, 15 were acquitted, although the single provinces offer great discrepancies, as will appear from the following statement, derived from Table IV. :—

	Acquitted.	Sentenced.	Of 100 Persons Indicted there were Acquitted.
In the City of Copenhagen	467	2,111	17
„ rest of Zealand	482	2,545	15
„ Island of Bornholm	79	283	15
„ Province of Funen	135	647	16
„ „ Lolland-Falster	79	490	13
„ „ Jutland	345	2,821	15
„ Iceland	56	216	19
„ Faroe Islands	3	12	20
„ West India Islands	5	27	16

Without attempting to offer any conjecture as to the probable causes of these discrepancies in the relative proportion of the acquittals to the convictions, I shall merely state, that it varied in France, during the period from 1825 to 1827, between 36 and 39 in the 100 indicted before the Assizes, and in England, during the seven years from 1827 to 1833, it was 19.

Considering the criminals in point of sex, Table III. will show that, of 9,152 persons sentenced, 6,521 were men and 2,631 women, making 71 men and 29 women in the hundred persons condemned—a proportion much greater than it is in France and England; in the former of which countries, during the period above stated, there were 20 females among 100 persons arraigned, and in the latter only 16. But what seems above all to deserve attention is the great number of female criminals at Copenhagen, where of 100 persons sentenced 34 were women, being in the proportion of 1 female to 3 males, although it must be stated, in mitigation, that a great number of those women were punished for illicit trade—an offence which does not involve so high a degree of moral depravity as most others that are brought under the cognizance of the law. How far the above facts are connected with a greater laxity of morals, which makes Denmark the nursery of a much greater number of illegitimate children than comparatively exists in most other countries, I do not pretend to decide; it is, however, not alone in the minor transgressions that the proportion of women is excessive, but it also appears, that amongst 37 persons guilty of murder there were 17 women, some of whom, however, had committed infanticide. Of the total amount of 9,152 persons convicted, according to Tables I. and III., it appears there were,—

which shows that among 100 persons convicted there were 5·87 children and persons unconfirmed, and 8·52 persons between 15 and 20 years—a proportion which does not seem extravagant, as compared with that in other countries.

A few observations with regard to the nature and extent of the crimes committed, and which are recorded in Tables II. and III., will, I trust, not be deemed here out of place. The French statistics of crime distinguish between crimes against the person and crimes against property; I have been the more induced to adopt the same classification, as I find it has recently been done in England also. It results accordingly, from the two tables above quoted, that, out of 12,012 cases brought before the Tribunals, 1,312 concerned crimes against the *person*, and 10,700 crimes against *property*; consequently, out of 100 cases 11 were against the person and 89 against property, while in France the proportions were respectively 28 and 72. If the paucity of offences against the person is indicative of the progress of civilisation, the above facts are worth attention. But what seems to be peculiarly striking is the discrepancy between the numerical proportion of acquittals for one and the same crime in one and the other country; because, while in France near one-half of the persons

accused of murder and homicide were acquitted, the criminal annals of Denmark offer but few instances of the kind. The comparison is still more favourable to Denmark, if it be considered that several cases of the above description occurred in the colonies, where, in fact, crimes against the person appear to be of greater frequency than in the mother country.

Amongst the offences against *property*, that of *larceny* is most prominent, and forms two-thirds of the total number of transgressions, as Table II. will show that 168 persons were sentenced for qualified theft, (burglary, housebreaking, and cattle-stealing,) and 5,200 for simple larceny, a number considerable enough if compared with the Criminal Returns of England and France, it being equal to one in 250 of the population.

It is to be regretted that the Danish Returns do not contain any data respecting the intellectual state of the persons arraigned, nor the number of previous condemnations passed upon relapsed criminals, beyond the number of persons sentenced for a repetition of simple larceny, and for receiving and concealing stolen goods. But *theft* constituting by far the greater portion of the crimes on record, it will not be without interest to take a short view of this part of the subject. The Tables V., VI., and VII., convey all the elucidation I have been able to collect; the first stating the number of condemnations in each year, the second exhibiting the sex and age of the criminals, and the third Return enumerating the provinces where the second and third condemnations have taken place.

As regards the nature of the *punishments* with which the various crimes and offences in Denmark were visited, Tables I., II., and VIII., contain the necessary details, which will show that amongst 9,152 condemnations 104 sentences of death were recorded, of which only 12 were executed in the course of seven years, making about $11\frac{1}{2}$ per cent., whereas, in England, from 1827 to 1833, the proportions did not exceed $4\frac{1}{2}$ per cent. The average number of condemnations in the latter country being 13,368 per annum, their proportion to those in Denmark is $10:23=1$, while that of the population of both countries is nearly the same, namely, $11:39=1$.

The following statement contains the average number of annual condemnations in the several provinces of Denmark Proper, indicating the number of convicts in each, and its proportion to the population, viz.—

PROVINCES AND DISTRICTS.	POPULATION.	Average Number of Condemnations in One Year.	Proportion to the Population.
City of Copenhagen	119,292	301,57	1= 396
Zealand, without Copenhagen . .	320,670	363,57	1= 882
Island of Bornholm	24,645	40,43	1= 610

„ Lolland-Falster.	66,186	70	1= 945
„ North Jutland	525,952	403	1=1305

According to which the proportion of condemnations to the population in Denmark Proper would be one in 963. Commencing with the districts where the greatest number of crimes have been punished, the scale is the following:—1st, Copenhagen; 2d, Island of Bornholm; 3d, Island of Zealand, exclusive of Copenhagen; 4th, Province of Lolland-Falster; 5th, North Jutland; 6th, Province of Funen.

As a final result, to be deduced from the details collected in the subjoined nine Tables, it would appear that the total number of persons committed for trial in Denmark Proper, (the cases cognizable by the police and the military courts excepted,) as compared with the population, yields a proportion of 1 in 713, while the same proportion in England and Wales, during the septennial period from 1827 to 1833, is 1 in 738. In order to facilitate the application of the annexed Tables, in making a comparison between the state of crime in Denmark and England, or any other country, I subjoin the following statement, indicating the principal proportions bearing upon the question, viz.—

N.B. The preceding Statement refers to Denmark and her Dependencies, excepting Sleswick-Holstein, and the Population has been taken at 1,340,000.

In conclusion of the preceding observations upon the Criminal Returns of Denmark for the last seven years, I conceive it not to be exceeding my limits, in subjoining a statement of the criminals who were kept in confinement in the prisons and other penal establishments in Denmark at the end of the year 1828, (Table IX.,) with some further details upon the subject, derived from an article of Professor David, on the criminal statistics of Denmark for that year.

It appears, from the papers under consideration, that the criminals confined in the several penal establishments of the kingdom, at the end of 1828, amounted,—

With regard to the nature of the crimes and offences for which the criminals were sentenced to imprisonment, Table IX. contains the necessary particulars, and the number of convicts at the end of 1828 amounting to 1406, the proportion between that number and the population of Denmark Proper would be 1 in 871. This proportion being in Norway 1=1154, in Sweden 1=1140, and in Prussia only 1=1550, the number of convicts detained in the prisons of Denmark may be called considerable. It will also be found that the proportion of women to men is much greater there than in those countries with which I have been able to draw a parallel in that respect. In Denmark, in 100 prisoners, 23 were women, while the proportion in Holland and Sweden was 20, and in Norway only 17.

The prisoners for life in Denmark constitute so large a portion as will hardly be found in any other country, their proportion to the rest of the prisoners being 54 in the 100. It must, however, be remembered that those confined during the King's pleasure are included in the number; although it frequently happens that such criminals, after some years' good behaviour in the establishment, receive the King's free pardon, and are discharged.

The persons sentenced for murder, homicide, or attempt to kill, and for concealing the birth of infants, amount to 53 in 100, making nearly 4 per cent. upon the total of prisoners, a proportion which in Norway exceeds 7 per cent. If it be considered that during these latter years eight-ninths of the sentences of death have been commuted for hard labour for life, this circumstance makes it evident that capital crimes are but seldom perpetrated in Denmark. Of 19 prisoners sentenced for piracy in the West Indies most were foreigners.

For arson, and other wilful burnings, 33 persons were sentenced, namely, 21 men and 12 women, being 1 in 51 male, and 1 in 27 female prisoners—a proportion which merits attention. We find 4 persons imprisoned for rape, and 8 for carnal offences, but none for unnatural crime. It is, however, a remarkable fact, that these crimes are of much greater frequency in Norway and Iceland than in Denmark.

By far the greatest part of the persons confined in the penal establishments of Denmark are expiating the crimes of simple and compound larceny, associating with thieves, and receiving stolen property, the proportion exceeding five-sevenths of the total of prisoners. In this instance there appears but a small difference in the proportion which the two sexes bear to each other, that of the males being 73, and that of the females 72 in the 100.

There are certainly many other interesting points of view in which the population of the Danish prisons might be considered, and by means of which many valuable data would be collected to throw light upon the moral condition of the country. "But," says the learned Professor, "it is a matter of regret that no further elucidation can be given on the subject, it having been impossible to ascertain the respective ages of the prisoners at the time they were sentenced, nor the number of previous condemnations, nor the legitimate or illegitimate birth of the prisoners, nor the degree of instruction they received." What regards the two last points in particular, it would be highly interesting to know in how far the allegation of an eminent Judge, "that the principal part of those persons who fill the public prisons are bastards," would be confirmed in the present instance. Such an inquiry is of still greater importance in a country where bastardy is so frequent as in Denmark—a fact to which I already adverted in my report upon the census of population of 1833.

(H.)—TABLES relating to the LYING-IN INSTITUTION at COPENHAGEN.

INTRODUCTION.

The annexed four Returns form Appendices to a Report made to the King of Denmark upon the operations of the Lying-in Institution at Copenhagen during the five years from 1832 to 1836*.

Table I. states the number of women delivered at the Lying-in Institution; and Nos. II., III., and IV., the number of children born in the establishment, and either supported there or abroad. In the remarks added to these Tables I have stated the various proportions between the number of births and deaths, or otherwise, as the case suggested.

The Return I. will show that, during the period from 1832 to 1836, the number of women admitted amounted on an average to 987 per annum; amongst whom 767 were unmarried, and 220 married, yielding a proportion of 100 to 29. The number of admittances considerably exceeds that during the four years from 1828 to 1831, when it amounted only to 891 per annum, the increase chiefly falling to the share of persons admitted gratuitously. On further comparing the two periods, a great discrepancy will be observed in the number of deaths, the proportion of which in the last-mentioned period was 5·50 in the 100 women lying-in, but which declined during the subsequent five years to 1·92 per 100. This favourable result is accounted for by the absence of malignant fevers of an epidemical tendency, which particularly prevailed amongst women in childbed in the years 1829 and 1831.

With respect to the infants born in the establishment, it appears from Table II. that the average number of one year during the period from 1832 to 1836 was 992, showing an increase of 97 upon the preceding four years. The proportion to still-born, and of deaths to births, has remained pretty equal in both periods.

Table III. exhibits a greater number of children left under the care of the institution during the last five years (641) than in the preceding period from 1828 to 1831, the increase being 58 children each year. No great discrepancy, however, is apparent between the two periods, excepting the number of children consigned to the country, and that of children and nurses supported daily in the nurseries of the institution.

The period from 1832 to 1836 shows a decrease in both respects, owing to less mortality amongst women in childbed than in the former one, of which the natural consequence has been, notwithstanding an increase in the number of births, that less children were supported in the nurseries, and afterwards to be transferred to the country.

Table IV. contains an account of the children supported at the expense of the establishment, either under the immediate care of the mothers or under that of other persons abroad. A comparison of both periods will show that the mortality amongst the children placed under the care of persons in the country was greater during the five years from 1828 to 1831, and that the whole mass, supported daily by the establishment, has increased in number from 939 to 1,011, which is easily explained by the institution having been frequented by a greater number of pregnant women than in the antecedent period.

The greater number of children placed in the country during the four years from 1828 to 1831 is accounted for by the greater mortality amongst women in childbed in 1829 and 1831, already alluded to; by which a great proportion of children, that would have been consigned to their mothers with a certain stipend for their support, were placed with foster-parents in the country at the expense of the institution.

In conclusion, I must observe that the proportion of deaths in the last-mentioned Table has been computed upon the total of children supported, as stated in the fourth rubric. However, confining the calculation to the number of children supported up to a given period, the mortality will appear much greater.

FRANCIS C. MACGREGOR,
CONSUL.

Elsinore, 15th September, 1837.

* The Lying-in Institution at Copenhagen was founded in the year 1783 by Queen Juliana Maria, and it combines the following objects:—

1st. To afford assistance in childbed to all unmarried women who may apply, and to a limited number of married women, in both cases either gratuitously or for a moderate sum.

2d. To afford practical instruction in midwifery to a certain number of persons of both sexes.

3d. To provide or to contribute towards the rearing of children born in the establishment by unmarried women, in so far as the mothers are unable to do it at their own expense.

At the end of 1836 the capital of the institution amounted to £40,627. 10s. Its income, during the five years from 1832-36, is stated at £7,487. 7s. 6d., and its expenditure during the same period at £5,719. 7s. 9d. per annum. The Government contribute a certain sum towards the support of the establishment, which sum has been fixed for the next four years at R.D. Bco. 8,000, or £900. annually.

The present Returns, illustrative of the Movement of the Baltic Trade, have been compiled from the Sound List, published upon the daily Reports emanating from the Oresound Custom-house.

With the exception of Coals, Salt, Corn and Grain, Timber, Deals, Dry-woods, Bricks, Tiles, &c., the Articles enumerated in these Returns generally constitute the principal part, but not the whole of the Cargo imported or exported.

The denomination of "Merchandise" denotes mixed Cargoes of Manufactures, and Colonial, or other raw produce.

Under that of "Piece Goods" is used for Cargoes principally composed of Articles of Manufacture, or Bale Goods.

The term of "Timber" includes all kinds of Wood employed in ship and house-building.

The difference between this and the foregoing Tables arises from the following causes :—

1. The years in these Statements are calculated from the 1st of January to the 31st of December, whilst, in the preceding Table, they are taken from the 1st of November to the 1st of October, the Austrian financial year.
2. The larger class of coasting vessels are included in these, and the smaller left out altogether. A separate account of all these is given in the other Table.
3. The tonnage given in the foregoing is according to the original ships' papers, whilst that in the former Table is according to the measurement made at Trieste.

GIRLS.

The establishments for the education of females, otherwise called nunneries, are almost wholly under the direction of the nuns, or of those bound by their vows to a monastic life. Some of these establishments receive boarders who pay for their education; others maintain schools where the children of the town may receive instruction gratuitously, whilst others keep private boarding schools in conjunction with a public and charity school. It is not practicable to give a classification of them.

III.—ELEMENTARY INSTRUCTION.

BOYS.

In almost every commune there exists either one or more elementary schools for boys, where instruction is imparted gratuitously. Latin is generally taught, although imperfectly, and in towns where the population is considerable the study of Latin is more carefully attended to, and, in addition to rhetoric, various courses in philosophy and mathematics.

Provinces.	No. of Communes.	No. of Schools.
Florence	90	73
Pisa	53	54
Siena	34	31
Arezzo	49	42
Grosseto	21	30
Total	247	230

This statement does not include the communal elementary boys' schools in the cities of Florence, Pisa, Prato, Pistoja, Leghorn, and Siena, in the commune of Vico Pisano, in each parish of which a school exists.

It is impossible to furnish an exact account of the number of children attending the above-mentioned elementary schools. Similar schools, where instruction is gratuitous, are also maintained by charitable individuals.

In the towns there are many other elementary schools, where the instruction is not gratuitous, which enjoy a greater or less degree of reputation; but sufficient details cannot be obtained as to their management to serve for any useful purpose in a statistical point of view.

Of institutions partaking of an educational and charitable character, there are in Florence Il Bigallo, or orphan school for deserted children, La Casa Pia di Orfani, La Casa Pia di Lavoro, or workhouse.

GIRLS.

Besides the schools or convents in which elementary instruction is imparted to females, whether as boarders or as gratuitous scholars in the charity schools, there are many elementary schools supported at the expense of the state, and of the towns also, by private subscriptions, besides those under the management of individuals who adopt this as a profession, and who are frequently destitute of the requisite qualifications for the office.

Among those of the first class are the normal schools in the following towns:—

Florence	No. 4, with 1,100 children.
Siena	1, 250 „
Pisa	1, 340 „
Pistoja	1, 230 „

Those of the second class are to be found in the following towns:—

Montevarchi,	S. Casciano,	Sarteano,
B. S. Sepulcro,	Massa Maritima,	Arcidosso,
Castiglione, Fiorentino,	Piombino,	Pitigliano,
Monte Pulciano,	Scanzano,	Sorano.
Serravezza,	Marciano,	

Of those of the third and fourth classes no sufficient details can be given.

OBSERVATIONS.

In the year 1835 the population of the Grand Duchy was 1,421,000 souls, the number of children of both sexes of fit age for attending the elementary schools may be generally calculated at one-fifth of the population; it follows, therefore, that the number of children frequenting the public and private elementary schools throughout Tuscany should be 284,200 individuals of both sexes. The want of exact details leaves no means of ascertaining the number actually attending. The partial researches that have been made leave reason to suppose that in the country-towns the proportion is not far wrong if taken at 1 in 69; and, to form a correct idea of the relative value of this cipher, it may be some assistance to know that the relative proportion may be expressed as follows:—for the kingdom of Lombardy-Veneto by 1·12; for the island of Corsica by 1·20; for the Duchy of Parma by 1·45; and for that of Lucca by 1·29. The proportion of 1·69 which is here assigned results from the following data: Country-towns, 46: Population of 46 towns, 216,329: number of public and private elementary schools, both gratuitous and stipendiary—Boys, 123, reckoning 2,162 scholars; Girls, 38, reckoning 947 scholars. From which it follows that the population is in proportion to the number of children of both sexes attending the schools as 1 to 69, or about 2 per cent.; but, as this class of instruction is better provided for in towns than in the country, we may take the proportion for the entire duchy as 1 in 60, and the number of children of both sexes actually attending the schools may be taken at about 21,300; whereas, were all those of an age for attending to be reckoned, the number would amount to 284,200 children of both sexes.

1834	29,509	1,401,336	$20\frac{3}{10}$	3,310	41,249	$8\frac{1}{2}$
Total .	263,729	13,366,557	..	31,750	336,267	..
Average	26,373	1,336,656	$19\frac{7}{10}$	3,175	38,627	$8\frac{1}{2}$

Thus, of 1000 inhabitants, $19\frac{7}{10}$ are admitted to the hospitals, which makes 1 in 51. Out of every 100 deaths, $8\frac{1}{2}$ occur in the hospitals—that is to say, about 1 in 12 of the population.

Taking a general view, the results are—

The average annual number of inmates, and of admissions, on a period of 10 years	29,115
The whole number of days in the year for the whole number of inmates	1,013,938
Deaths	3,175
Average mortality, per 100	$10\frac{2}{10}$
Average days passed in the hospital by the inmates	$34\frac{8}{10}$
Average daily cures of the sick	2,752

The hospitals are equally accessible to foreigners and natives. In Leghorn and Florence the number of strangers is not inconsiderable; and in the Maremme, to which so many emigrants are attracted by the demand for labour, the proportion of foreigners is great.

REMARKS.—Rate of Exchange taken at 100 Pistres per Pound Sterling. The Port of Enos is much frequented by a number of small Ionian and Greek Vessels, engaged in the Coasting Trade, but as they seldom either discharge or load the whole of their Cargoes there, and do not take their expeditions thence, the particulars relating to them cannot easily be obtained. The Cargoes of Foreign Vessels are generally Wool, and their destination Marseilles. There was no direct trade from England to the Ports of this Consulate in 1835. The remainder of the crop of Valonia, the only merchandize shipped from this coast direct to England, was loaded at Macri in two English Vessels, but as they both returned to Smyrna to complete their Cargoes, they did not take their expeditions at Enos, and consequently are not included in this statement. All the rest of the Produce destined for England is sent either to Smyrna or Constantinople for embarkation.

Port au Prince .	Liverpool .	11	74,660	General Cargoes; Dry Goods	..	£.	..	The vessels bound to Cowes and Falmouth only call there for orders, their cargoes being destined for a Continental market. As official returns are only procured from Cape Haitien, Gonaives, Aux Cayes, and Jeremie, the value of cargoes shipped at St. Marc, Jeremie, &c., is given here from data furnished by the merchants; and the value of cargoes shipped at either of the first-named ports appear under each respectively, that shipped at Port au Prince alone appearing in this statement. The vessels laden with mahogany for the English market proceed in the first instance to a British colony to land and reship their cargoes. The term "Produce" signifies agricultural produce, such as coffee, cotton, tobacco, &c., with logwood generally for dunnage.

(A.)—AN APPROXIMATE RETURN OF THE PRINCIPAL YEARLY EXPORTS FOR EUROPE OF PERUVIAN NATIVE PRODUCTIONS (excepting the Precious Metals), specifying their AVERAGE PRICES and TOTAL VALUE, Free on Board, in a Peruvian Port, so far as it has been possible to obtain the same.

BARK	14,000 Qtls. of 100lbs. Say								BARK.—Calesaya Bark is grown exclusively in the Bolivian Republic, and its export is rather on the increase. The descriptions exported from the northern departments of Peru are grey, crown, and red bark, of which three, the last bears but a very small proportion, being only used in the manufacture of tooth-powder, and has been sold as high as 60 dollars per quintal.
Calesaya	10,000	32a. per Quintal	6	4	0		85,250	0	
Red and other kinds	4,000	30b. per Quintal	5	16	3				
CHINCHILLI SKINS	4,000 Dozens	4b. per Dozen	0	15	6		3,100	0	COPPER, being the produce of the mines situated in the Bolivian Republic, but exported at the Peruvian ports of Arica and Yslay, in return for European goods imported through Arica for the consumption of Bolivia.
COPPER	500 Quintals	9b. per Quintal	1	14	10½		871	17	
COTTON	8,000 Quintals	12b. per Quintal	2	6	6		18,600	0	COTTON either is or can be grown along the whole coast of Peru, and there are two qualities of it, distinguished as long and short, staple or "ginned," as the latter is called by the English brokers, under the impression, said by the growers to be erroneous, that it arises from its being broken by the cylinder in cleaning. The long staple is estimated in the English market equal to the best Georgia; when Paiza cotton (and from Paiza the best is exported) was quoted on board at 11½d. to 11¼d. per lb., Georgia, good or fine, stood at 11½d. to 11¼d.; Egyptian stood at 15¾d. to 16¾d. per lb.; Surat, 7¾d. to 8¾d. per lb.; Bengal, 7d. per lb. The annual exports of Peruvian cotton are increasing. Great improvements are also making in the mode of cleaning and packing it. No export duty is charged on cotton, nor on any native production, excepting salpêtre and the precious metals.
HIDES, OX AND COW	20,000, or 6,050 Quintals	Dry, 8b. 6a. per Quintal Wet Salted, 6a. 4a. per Quintal	1	13	10½		45,637	4	HIDES have only recently become an article of export from Peru. About a year since they fetched in the English market 4½d. per lb., wet salted. They are not so highly appreciated as the Buenos Ayrean, and there is no prospect of any immediate increase in their export. The proportion of dry to wet salted is about two-thirds in favour of the former, say 13,000 dry, 3,250 quintals at 8b. 6a. per quintal, 28,437b. 4a. = 5,509½. 15s. 3¾d.; wet, 7,000, 2,850 quintals at 6b. 4a. per quintal, 18,200d. = 3,256½. 5s. The dry weigh, upon an average, 25 lbs. each; the wet, 39 lbs. 40 lbs.
SALTPETRE	150,000 Quintals	3b. 6a. per Quintal	0	14	6½		562,500	0	SALTPETRE.—Export duty about 5d. per cwt.
SEAL SKINS, FUR	6,000	2b. 6a. per Quintal	0	10	7½		16,500	0	SEAL SKINS.—Export decreasing, from the scarcity of seals, owing to the great destruction of them during late years. Foreign vessels and boats are prohibited to approach its coasts and islands for the purpose of destroying seals; to ob foreign-built boats are fitted out at Callao and Paiza by Englishmen, manned chiefly by British sailors, for such expeditions, under the Peru which are cured wet salted, are frequently exported to the United States market are according to their quality, from 15s. to 35s. each; as those taken in high latitudes. SUGAR	7,000 Quintals	4b. per Quintal	0	15 6	1,182,137 4	28,000 0	229,039 2	9 3	5,425 0	0	SUGAR can, for the present at least, hardly be considered as an article of Peruvian export to Europe, although recent experiments have demonstrated, that when exported as "Muscovado," it will form a preferable return to bullion. The average freight to England, per ton, 5 <i>l.</i> 6 <i>s.</i> in barrels, 4 <i>l.</i> 4 <i>s.</i> in bags. It fetches about 30 <i>s.</i> to 40 <i>s.</i> per cwt. in the English markets. The planters, however, prefer exporting it to Chili in a clay refined state. About 140,000 arrobes = 35,000 quintals, may be yearly exported from Peru. The Spanish quintal is equal to 100 lbs. English.
TIN	17,000 Quintals	12b. per Quintal	2	6 6	204,000 0		39,525 0	0			TIN, being the produce of the mines situated in the Bolivian Republic, but exported at the Peruvian ports of "Arica," and "Yslay," in return for European goods imported through Arica for the consumption of Bolivia.
VICUNA WOOL	400 Quintals, or 40,000 lbs.	1b. 4r. per lb.	0	5 9 3	60,000 0		11,625 0	0			VICUNA WOOL.—The quantity of this wool here stated comprises the whole amount of wool exported, including that on skins, estimating each skin to give 1 lb. of wool.
WOOL, SHEEPS'	16,000 Quintals	12b. per Quintal	2	6 6	192,000 0		37,200 0	0			WOOL, SHEEPS'.—The largest quantities are exported from Yslay, and are chiefly produced in the neighbourhood of Lampa, Puno, and Cuzco. Its great softness is its recommendation; but it is susceptible of great improvement in the mode of cleaning and separating it. It fetches about 9 <i>3</i> / <i>d.</i> to 10 <i>4</i> / <i>d.</i> per lb. in English markets. A good deal of wool is, however, stripped from the skin by means of lime, and such is not worth more than 7 <i>d.</i> per lb., and would be unsaleable whenever the English wool market should be dull. The wool exported at Callao, produced in the interior mountainous districts between Lima and Cerro de Pasco, is the same in quality as that exported from "Arica" and "Yslay," but from being better cleaned and picked, usually brings <i>3</i> / <i>d.</i> to 1 <i>4</i> / <i>d.</i> more. All the above-mentioned wool is from the mountainous districts only, and known by the name of "Lana Serrana," that produced on the coast is hairy, coarse, harsh, and hardly worth its freight and expenses. By a recent decree, the export of wool from Peru is altogether prohibited; but, on the representation of the Consulate-General, its effects were suspended as regards the northern departments. The Government having also pledged itself to reconsider the policy of the whole decree.

District of Quebec.	Quebec	122	103	225	The mode of Instruction in each School is greatly at the discretion of the Teacher; no particular being enjoined by the Board of Royal Institution.	£.	s. d.	No Return.	No Return.	The Schools mentioned in this Return are under the superintendence of the Board of Royal Institution for the Advancement of Learning, incorporated by the Provincial Act, 41st Geo. III., cap. 17. To this Board the Legislature makes an annual grant. Each Teacher is bound to instruct one-third of the number of Pupils gratuitously; and in no case to charge more than 3s. 4d. per Month. The Visitors may vary the rate according to the Number of Children in each Family who attend School, and the circumstances of the Parents. There are also two Grammar Schools, one at Quebec and another at Montreal, supported by an annual grant of £200 each from the Jesuit Estates Fund; with £90 and £50 respectively, for House Rent. These are also under the superintendence of the Royal Institutions. The system of Instruction is that of the Public Grammar Schools of England. Twenty-six Free Scholars are admitted into each of them. The rate of tuition for others is £12 per annum. There are also upwards of 1000 Schools established under the Provincial Act, 9 Geo. IV., cap. 46, attended by about 45,600 Scholars of both sexes. £20 are allowed to each Teacher having at least 20 Children. These Schools are under the direction of Trustees annually elected by the Inhabitants. No particular system of tuition is followed; but the Lancasterian is pursued in a few of them. There are also several Roman Catholic Colleges in the Provinces, and a number of Private Seminaries for the higher branches of Education.

(a) Reduced to sterling, the amount would be nearly as follows:—Treasury, £540; parishes, £123; private, £192, 15s.; total, £1,151, 15s. The parishes board as well as educate a certain number of poor children; the remainder of the expense is for education alone, no account being here taken of the usher's charge for private boarders.

(b) The school, supported by the Customs' department, is for the children of liberated Africans.

(c) There are Sunday schools in all the parishes, but no return has been made of them.

(d) There is also a Sunday school in St. Paul's parish; numbers not returned.

(e) This school has been broken up for want chiefly of a school-room, the rector having no house in the parish.

(f) The infant school at Parham has fallen off considerably of late; a better school is wanted in the town.

(g) The Green Castle school has been interrupted for some months.

(h) The total number under daily instruction is 1,635, not including the Rev. Mr. Gilbert's school. The Sunday schools, excepting in St. John's parish, are not included in the return, computing on their list at least 1,000, besides those who also attend weekly schools. Of the Moravian and Wesleyan schools the archdeacon is unable to give an accurate account, but believes the numbers in them to be considerable.

REMARKS.—There is a Sunday School at Highgate Chapel, the Master (Clerk of the Chapel) is remunerated by the Lord Bishop. The religious instruction at the different Schools is conducted according to the principles of the Established Church; the Scholars are taught gratuitously. The instruction on the other Estates is at present at a stand, principally owing to the reluctance of the Apprentices to attend the Schools. One Catechist's situation is vacant.

There are under the superintendence of the Methodist missionaries 18 schools situate in the following places:—Basseterre, Palmeto Point, Old Road, Sandy Point, Deep Bay, Cayon, and Greatheads. Of the above schools 8 are infant schools, and these only are conducted by salaried teachers. The schools contain 1,560 scholars—560 males, and 1,000 females. In all the Sunday schools, and week-night adult schools, the pupils are instructed to read and spell in classes. They also receive catechetical and religious instruction, and a few of the adults of the week-night schools are taught writing. The infant schools are conducted according to the infant school system. The schools are supported chiefly by donations from benevolent persons in England and this colony, by occasional grants from religious and educational societies, by annual collections made in behalf of schools in all the Methodist chapels in the island, and by the assistance of the Wesleyan Missionary Society.

Partly by Contributions from private individuals, but chiefly by payment of 5d. sterling from free parents, and 3d. sterling from apprentices. The attendance is so fluctuating under the present most unsatisfactory system, that an accurate state- ment can scarcely be given.	About 8 dollars, or 17 15s. sterling for the best at- tended; 18s. sterling for the other two; and 6 1 6d. sterling for the last. Books supplied by the Society for Promoting Christian Knowledge.	..	..

* Of the 6 Sunday Schools established last year, only one remains, and that has increased to 150 Scholars. A few persons attend occasionally at the Union, and are there taught by the rector and catechist. Nothing but a Colonial enactment compelling the attendance of the children under a certain age, can secure a sufficient number of scholars. Three things are wanting—time, money, and attendance—if the pupils be instructed during the week.

AMOUNT of PAPER CURRENCY in CIRCULATION, 1835.

The Paper Currency in circulation consists of notes of the Bank of New South Wales, Bank of Australia, Commercial Bank, and Bank of Australasia.

The average amount in the year 1835 may be estimated as follows:—

Bank of New South Wales*	£31,209
Bank of Australia*	36,017
Commercial Bank*	23,095
Bank of Australasia†	1,549
	£91,870

* These establishments are Joint Stock Companies, the shares of which are transferable.

† This is a chartered Bank.

NOTE.—The notes are all of sterling denomination, and are convertible into British money on demand. The great portion of the circulation of this colony is carried on by drafts or checks on one of the four Banks, the mass of pecuniary transactions centring in Sydney, and almost every individual of property having an account with one or other of the Banks, in which, for security, a large proportion of their cash is lodged.

<i>In Private Houses, in the Four Cities, and the various Casals of Malta and Gozo.</i>										
Cotton Sail-Cloth	..	..		..	..	..	..	£ 24,000	The cotton used is the growth of the island.	
Nankin Table-Cloths, Counterpanes, Blue and Striped Cloth for Shirts, Trousers, &c.	..	..		..	..	..	..	58,500	The cotton cloths are chiefly of a coarse quality, for the use of the inhabitants and for exportation.	
Cotton Yarn, spun by hand	..	..		..	..	..	..	35,000	Black silk stuff is much used. An attempt was made some years back to make it in the island, but without success: it is chiefly imported from Sicily.	
Black and other Silk Stuff	..	..		..	..	..	..	970	The stone for paving and building is exported in considerable quantities to Constantinople, the Black Sea, Egypt, &c.	
Malta Stone, wrought into Vases, Flower-pots, &c.	..	..		..	..	..	..	12,000	The intrinsic value of the metals is included in the value of the wrought gold and silver.	
Wrought Gold and Silver	1,130	12		..	..	..	..	4,287	The Maltese are good shipwrights, and ship-building is much increased of late years. The timber is chiefly from the Adriatic.	
.	..	..	None; but stone quarries in every part of the island.	..	..	..	..	..	At one season of the year,—viz., from August to October—great quantities of a particular kind of fish are taken, resembling the dolphin, called Lam-poukeag.	
.	..	..		..	..	285	None, except for the daily supply of the market, in which, however, are employed 285 boats.	..
